CALL WESTERN TODAY TO DISCUSS A MOBILE LUBE FIELD SERVICE UNIT FOR YOUR NEEDS!

Western's field service **mobile lube** outfits are designed and manufactured to provide an efficient means of servicing large or dispersed equipment where a return to base workshop would be costly and time consuming.

The typical use for these units is in the area of construction and agricultural equipment. Also they are an excellent alternative for applications such as quarrying and open cast mining, power generation plants, airfield equipment and even for temporary depot use with commercial or public services vehicles.

Field service units provide the means of dispensing all lubricants together with compressed air and, if required, other fluids. Field service units can be equipped with their own independently powered gasoline engine compressor (diesel engine on request) thus enabling full workshop service routines to be carried out even in the most remote locations. Units incorporate the necessary lubricant pumps and delivery hose reels onto a rugged chassis together with the air compressor and other accessories required for its operation.

Customers are saying:

"This machine used to take me an hour to service: now with my 'Mobile Lube Skid' it takes me 10 minutes"
