## WESTERN OFFERS MANY MOBILE SERVICE UNIT CONFIGURATIONS!

Western's field service and mobile lube truck outfits units are designed and manufactured to provide an efficient means of servicing large or dispersed plant where a return to base workshop would be costly and time consuming.

The typical use for these units is in the area of construction and agricultural equipment. Also they are an appreciated alternative for applications such as quarrying and open cast mining, power generation plants, airfield equipment and even for temporary depot use with commercial or public services vehicles.

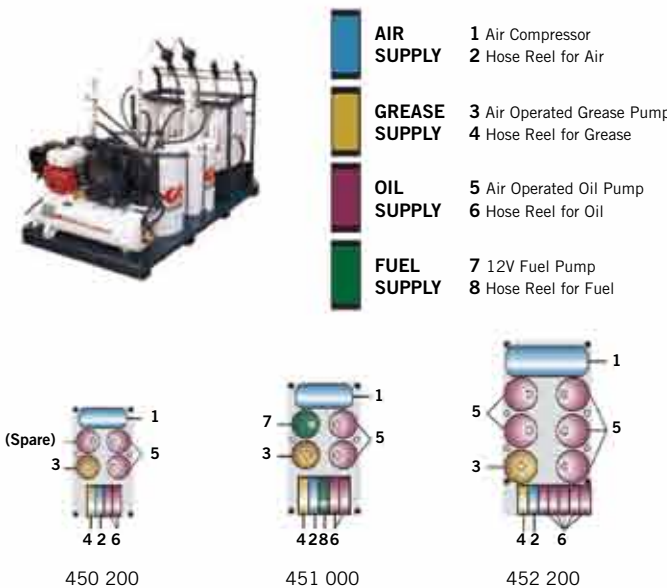

Field service units provide the means of dispensing all lubricants together with compressed air and, if required, other fluids. Field service units are equipped with their own independently powered gasoline engine compressor (diesel engine on request) thus enabling full workshop service routines to be carried out even in the most remote locations. Units incorporate the necessary lubricant pumps and delivery hose reels onto a rugged chassis together with the air compressor and other accessories required for its operation.
